

AI Impact on Jobs 2030 - ETL & EDA Project

Project Overview

This project performs ETL (Extract, Transform, Load) and Exploratory Data Analysis (EDA) on the AI Impact on Jobs 2030 dataset using Python.

Technologies Used

- Python
- Pandas
- Matplotlib
- Seaborn

ETL Workflow

Extract

- Read dataset from CSV file

Transform

- Remove duplicate records
- Check missing values
- Detect and remove outliers using IQR
- Create Salary Category
- Create Experience Level
- Create AI Risk Level

Load

- Save cleaned dataset as CSV

Visualizations

Salary Category Distribution

Bar chart showing the distribution of salary categories.

Correlation Matrix

Heatmap showing relationships between numerical features.

Output Files

- processed_ai_jobs.csv
- salary_category_distribution.png
- correlation_matrix.png

Key Skills Demonstrated

- Data Cleaning
- ETL Pipeline Development
- Feature Engineering
- Data Visualization
- Exploratory Data Analysis (EDA)
